Art Unit: 3662

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the features of claims 22, 23, 24, 27, 28, 29 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

2. Claim 17-31 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The terminology "processing in said chamber in a wafer cassette" in claim 1 is inaccurate.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

5. Claims 17-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Parodi et al in view of Prentakis, Cheng # 6,053,688; Yonemizu, Japanese Patent # 7201949 and Tateyama, et al # 5,442,416.

Parodi et al discloses a substantially similar handling system note Fig. 10B with transfer arm #208. Parodi et al lqcks a transfer arm with a fork feeding from a cassette robot. Prentakis and Cheng '688 disclose a fork transfer arm. Yonemizu, et al discloses a transfer arm # 3 receiving wafers from a cassette robot in Fig. 1. It would have been obvious to a mechanic with ordinary skill in the art at the time the invention was made to provide the primary reference with a transfer arm having a fork feeding from a cassette robot. The motivation is to increase the through put of the handling system. Japanese Patent # 7201949 discloses a one way system (claim 29). Tateyama et al '416 disclose a heating unit behind a cooling unit (claim 20).

6. The remaining references are cited to show similar structure.
